

Covid-19 Solutions: Thermal Screening

The Thermal Screening solutions provided by Micromax Health can be used to quickly alert medical staff to any visitors that are showing elevated temperature readings. They can be set up in clinics, hospital entrances, waiting rooms, staff sign-in centres and critical care wards.

This one system can replace critical medical staff who can be better utilised elsewhere. And it will allow a high traffic flow rate – while still maintaining high accuracy.

TYPICAL SETUP

THERMAL SCREENING FEATURES:

- Instant notification of raised temperature in visitors
- Quick installation in busy locations
- Helps to maintain social distancing
- Reduces staff workload
- Protects staff and patients
- Aftercare provided
- Simple to use.

PRODUCT BENEFITS:

- Non-contact measurement to avoid physical contact
- 1 second per person for temperature detection
- AI detection, greatly reducing false alarms
- Highly accurate readings within 0.3°C with full setup
- Helps to protect staff and patients
- Multi-person temperature screening, enhancing efficiency
- Easy to use interface that does not require specialised staff or extensive training.
